ABOUT

Final-year Computer Science (AI & ML) undergraduate building Generative AI applications, Retrieval-Augmented Generation (RAG) pipelines, agentic workflows, and Python backend services. Proficient in LangChain, CrewAI, ChromaDB, FastAPI, and LLM APIs (Gemini, Llama 3.1, Groq), with projects taken from prototype to live deployment. Seeking AI/ML internships and entry-level AI/GenAI Engineer and Python Backend roles.

PROJECTS

PayPilot-AI — Agentic Commerce Platform *(Razorpay Buildathon, Track 01)*

Python, FastAPI, React 18, PostgreSQL, Razorpay API, Docker, Gemini / Groq | github.com/prashanthpolisetty/PayPilot-AI

- Architected an 18-step agentic commerce pipeline in which an AI buyer agent extracts customer intent, ranks products via semantic RAG vector search (TF-IDF cosine similarity), and proposes contextual upsells.
- Built a deterministic policy and fraud-risk engine, fully decoupled from LLM reasoning, enforcing a hard ₹1,00,000 per-transaction cap, a ₹2,00,000 daily spend limit, and per-item quantity guardrails.
- Implemented a human-in-the-loop approval gate with approval tokens cryptographically bound to cart-version numbers, preventing price tampering or cart alteration after approval.
- Integrated Razorpay test-mode payments with server-side HMAC-SHA256 signature verification and idempotent webhook processing to eliminate duplicate charges.
- Shipped a containerized full-stack app (React 18 + FastAPI + PostgreSQL, Docker Compose) including a merchant analytics dashboard tracking AI-assisted revenue uplift and upsell attach rate.

Document RAG Chatbot — GenAI / RAG Web Application

Python, LangChain, ChromaDB, Llama 3.1, Streamlit | Live: ragbotq.streamlit.app | Repo: github.com/prashanthpolisetty/RAG-bot

- Built and deployed a Retrieval-Augmented Generation chatbot on Streamlit Cloud that answers questions strictly from user-uploaded PDF, TXT, and DOCX documents.
- Designed a recursive character-splitting strategy (700-character chunks, 100-character overlap) to keep concepts split across chunk boundaries semantically intact.
- Ran embeddings locally with the all-MiniLM-L6-v2 Sentence Transformer to avoid Gemini API rate limits, persisting vectors in an offline ChromaDB store.
- Implemented a strict retrieval-then-generate pipeline (gemini-1.5-flash) that cites its sources and explicitly declines to answer when information isn't present in the uploaded documents.
- Achieved >80% evaluation accuracy on document Q&A while cutting document-processing overhead by 35% via recursive asynchronous directory scanning and metadata tagging.

Meeting Minutes Generator — Speech AI & Automation

Python, TypeScript, OpenAI Whisper, Groq API, Google Gemini API, MongoDB | Repo: github.com/prashanthpolisetty/Meeting-minutes-Generator

- Built an autonomous meeting assistant that transcribes audio locally with OpenAI Whisper, keeping raw recordings off any cloud LLM for privacy and low latency.
- Designed a multi-LLM consensus pipeline running Gemini, LLaMA 3.1, and Mixtral in parallel, with a judge LLM selecting the best summary, key decisions, and action items and explaining its choice.
- Built a FastAPI + MongoDB backend with async background processing and a React (Vite, TypeScript, Tailwind) dashboard for uploads, live processing status, and meeting history.
- Automated meeting-minutes distribution by generating formatted HTML emails with summaries, decisions, and assigned action items, dispatched to all participants via SMTP.
- Bundled local ffmpeg/ffprobe binaries for offline audio standardization, removing system-level configuration dependencies for end users.

AI Resume Analyzer

Python, LangChain, Google Gemini API, Pydantic, PostgreSQL | Repo: github.com/prashanthpolisetty/AI-Resume-Analyzer

- Built an AI resume screener with LangChain and the Gemini API that evaluates candidate profiles roughly 15x faster than manual recruiter parsing.
- Enforced strict Pydantic JSON schemas to reliably extract keyword matches, grammar/quality indices, and skill gaps from unstructured resume text.

- Designed few-shot and Chain-of-Thought (CoT) prompting strategies, achieving 80% format consistency across generated ATS scoring reports.
- Added student-focused tools — an ATS Reality Check showing raw parser-visible text, a Skill-to-Proof Validator flagging unproven skill claims, and a Buzzword Blaster catching generic phrasing.
- Implemented PostgreSQL-backed analysis history with progress tracking that compares each new upload's score against the candidate's previous submission.

SKILLS

Languages & Frontend: Python, Java, JavaScript, React, SQL, HTML5/CSS3
AI / ML & GenAI: LangChain, CrewAI, RAG, Llama 3.1, Google Gemini API, Groq, Sentence Transformers, Scikit-Learn, Pandas, NumPy
Databases & Backend: ChromaDB, PostgreSQL, MySQL, FastAPI, Flask, Pydantic, REST APIs, Razorpay API
Tools: Git, GitHub, Docker, Streamlit, Jupyter Notebook, VS Code, PyCharm, Cursor

EXPERIENCE

Machine Learning Intern — Unified Mentor May 2025 – Jun 2025 | Remote, India

- Built end-to-end regression pipelines in Python and Scikit-Learn for House Price Prediction and Mobile Phone Price Estimation.
- Performed EDA on structured datasets: missing-value treatment, correlation heatmaps, feature engineering, and data scaling.

Industrial Engineering Trainee — Tata Advanced Systems Limited (TASL) 2023 | Hyderabad, India

- Trained in precision tool engineering and quality compliance workflows on the shop floor.

EDUCATION

B.Tech in Computer Science Engineering (AI & ML) 2024 – 2027
Neil Gogte Institute of Technology (NGIT), Hyderabad | CGPA: 8.06 / 10.0

Diploma in Tool & Die Making 2020 – 2024
Central Institute of Tool Design (CITD), Hyderabad | 74.15%

CERTIFICATIONS

- GenAI Powered Data Analytics Job Simulation — Forage & Tata Group (expected Jun 2026): enterprise data workflows with Python and GenAI.
- Mobile App Development (Kotlin) Certification — online training (2024).
